NEW SCRATCH - GRADE 2

- Lesson **01** Introduction to Scratch
- Lesson **02** Super Cat
- Lesson **03** Cat and Mouse
- Lesson **04** Space Rockets
- Lesson **05** Space Dog
- Lesson **06** Space Shooters
- Lesson **07** Farm Animals
- Lesson **08** Concert Composer
- Lesson **09** Storyteller
- Lesson **10** The Magnet
- Lesson **11** Even or Odd
- Lesson **12** Family Tree
- Lesson **13** Working People
- Lesson **14** Water Cycle (Open Project)
- Lesson **15** Recycle Game (Open Project)

LESSON 2
SUPER CAT

BY RANA DAJANI

SUPER CAT

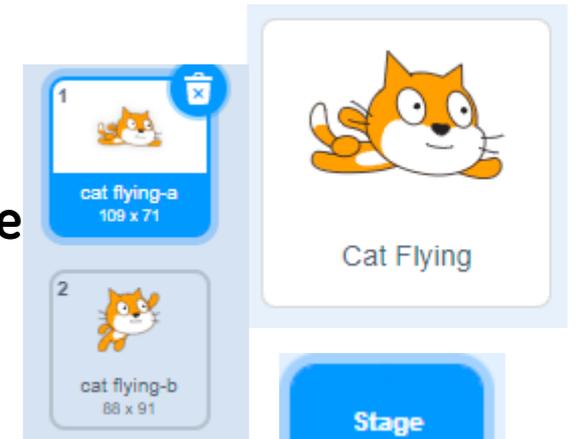

Create a super flying cat!

- Design a background
- Redesign a character
- Move the cat randomly around the screen by changing its positions

1 Choose a character

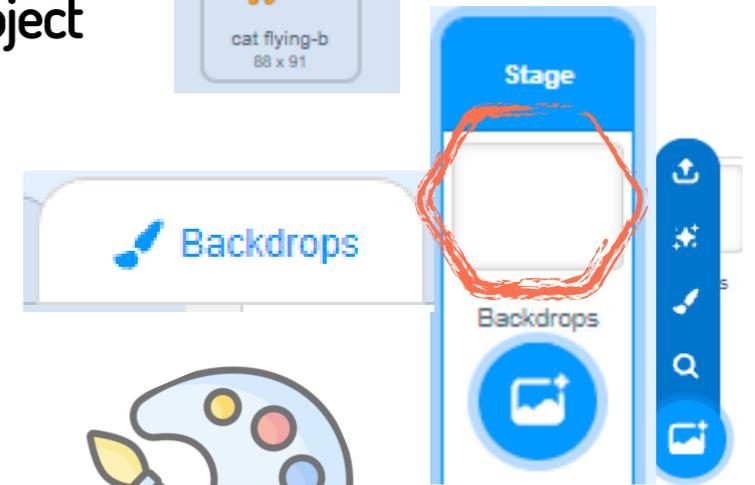

REMEMBER

Check what costumes the character has that you can use in you project

2 Paint a background

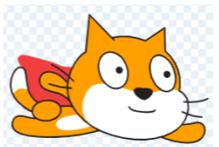

3 Redesign your character and background!

Useful edit tools

Give the cat a cape

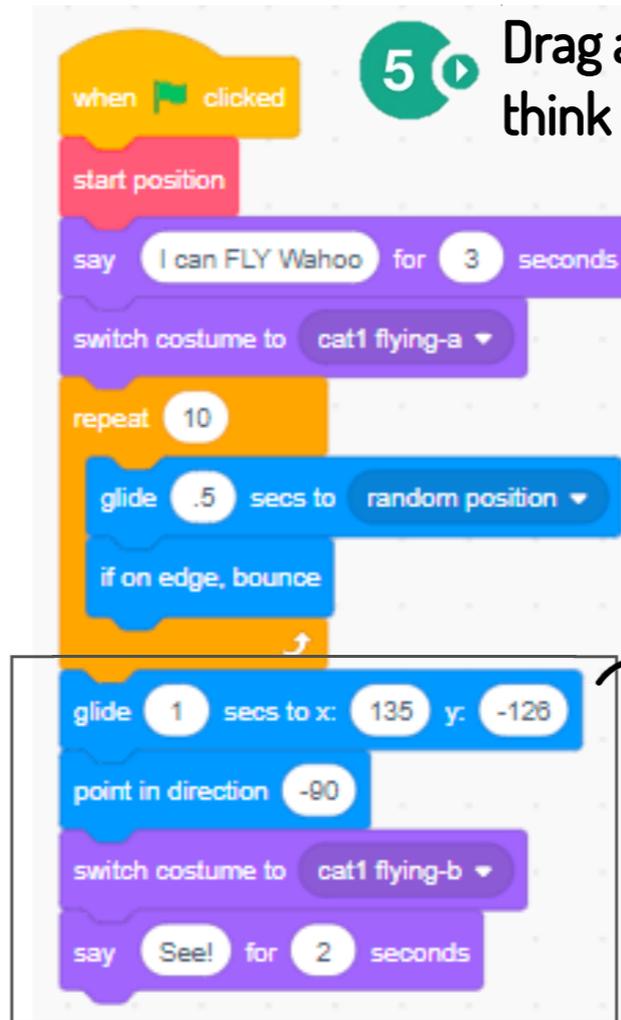

SUPER CAT

4 Create a plan to follow

- decide the initial characteristics of your character and create and define the start blocks stack
- decide how many times you want your character to fly to a random position
- decide how you want your program to end (decide the position, size, direction, costume of your character at the end)

```
go to x: 135 y: -126
glide 1 secs to x: 135 y: -126
```

```
when clicked
start position
say I can FLY Wahoo for 3 seconds
switch costume to cat1 flying-a
repeat 10
  glide .5 secs to random position
  if on edge, bounce
glide 1 secs to x: 135 y: -126
point in direction -90
switch costume to cat1 flying-b
say See! for 2 seconds
```

5 Drag all the code blocks that you think you will need to the script area

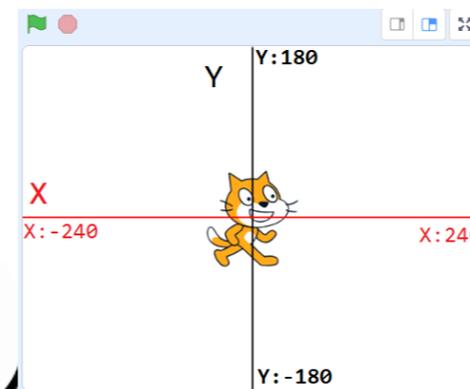

```
define start position
set rotation style left-right
switch costume to cat1 flying-b
go to x: -169 y: -127
point in direction 90
```

Think about the order

This is what the cat will do at the end of the flight and how it will look at the end of the program

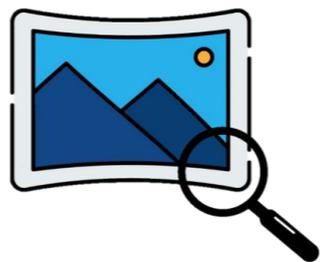

Position: is x and y coordinate numbers

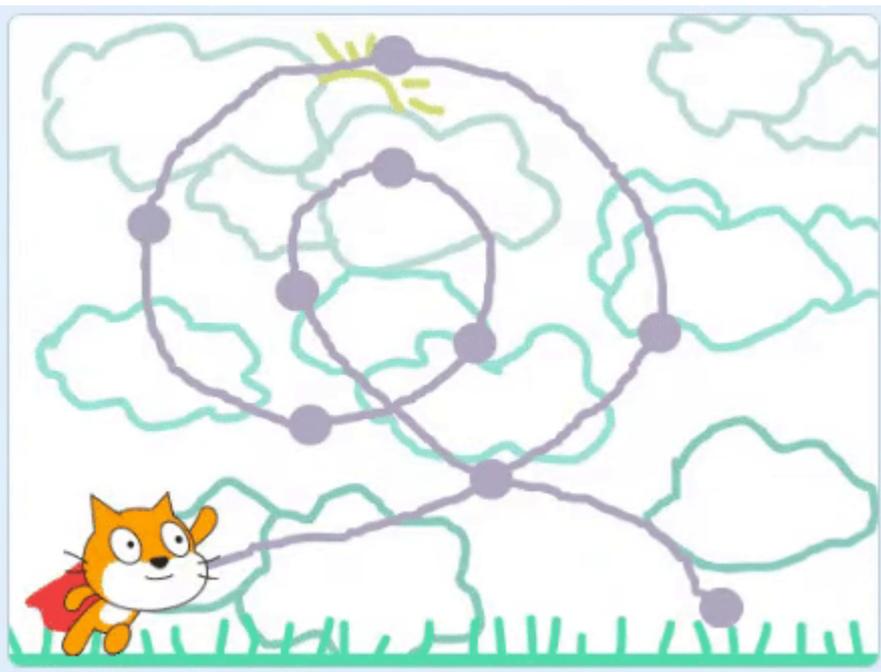

Drag your character to the position you want, then copy the x and y values into your coding blocks

SUPER CAT

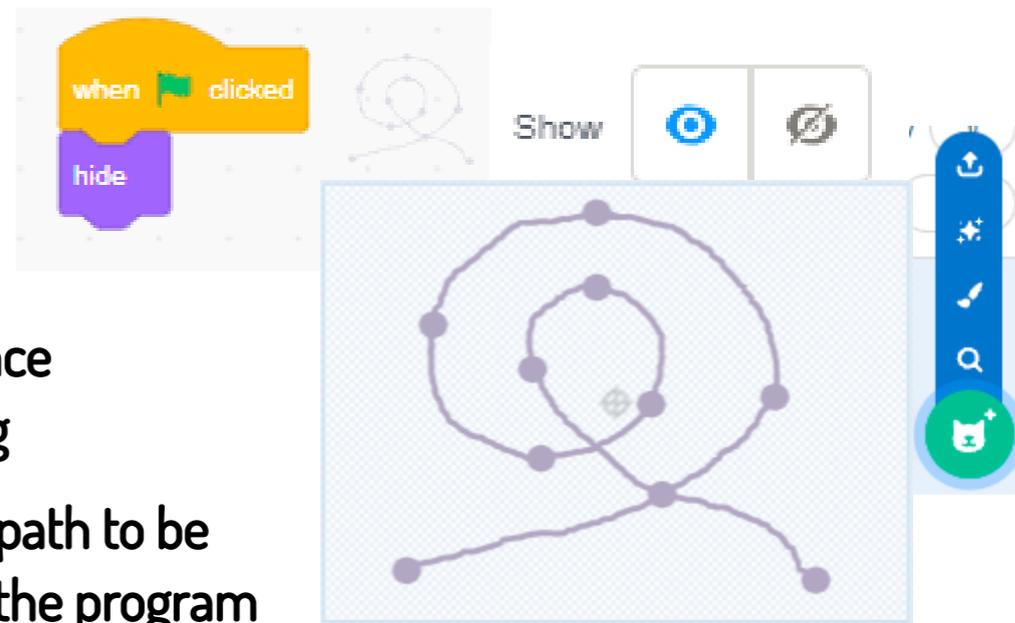

Check out the lesson's gallery to find additional characters and background options

CHALLENGE YOURSELF!

Hint: You can create a new character and paint a path with dots that you can use as reference points for the cat to move along

You can choose if you want the path to be shown or hidden at the start of the program

Modify your program to fly the cat along a certain path (you decide the cats positions, not random)

go to x: 135 y: -128

glide 1 secs to x: 135 y: -128
